

## Now online: new test system finder

**Digitaltest's new test system finder shows electronics manufacturers the right test system for their production in no time at all. The online tool can be accessed via the Digitaltest website and provides a meaningful recommendation for the implementation of the individual test strategy.**

Different module types – i.e. low or high mix – influence the result just as much as the number of PCBs tested per year or the number of nets. The test system finder delivers up to two suitable systems for the respective production requirements in just a few seconds. The results include in-circuit testers and flying probers, combined with adapters or parallel test extensions as required. Just try it out: <https://www.digitaltest.com/en/test-systems/test-system-finder/>

### About Digitaltest

As a leading partner in the electronics industry, Digitaltest develops and produces automated test equipment (ATE) for electronic circuit boards, software for automating production, and quality management systems. Digitaltest is known for innovative solutions for optimizing the entire manufacturing process – as an interface between CAD, the testing process and production itself. We also offer comprehensive service and support, including complete outsourcing of PCB testing at locations worldwide.

Rely on our over 35 years of cutting-edge technology, reliability and long-term value in automated testing systems.
