

Diehl AKO® supports the worldwide household appliance industry with resource-saving solutions – and Digitaltest is there with the required standardization.

The challenge

The high level of standardization means Diehl AKO needs global availability of their suppliers. They also required to have a intuitive and simple to use test system software.

Our solution

Digitaltest is a global presence with locations in Germany, USA, Great Britain, Singapore and Egypt as well as sales partners all over the world. This means we can provide support on an international level. Diehl AKO also profits from the fact that Digitaltest systems work in harmony with other test systems – wherever they are in the world.

CITE is also a very user-friendly software which automatically creates test programs and is at home in the flexible programming environment of Visual Basic.

Source: Diehl AKO

Diehl AKO has been using test systems from Digitaltest for over 10 years. Testers are now in place at facilities in Germany, Poland, USA and China.

We chose Digitaltest because...

... other company divisions had already worked effectively with Digitaltest and an additional benchmark had convinced us.

We made the right decision because...

... the price/performance ratio is right, the service is excellent, and these expert partners are also able to provide assistance with application questions.
