

Digitaltest supports an experienced partner for the electrical industry from Austria with efficient and user-friendly test systems.

The Challenge

The process requirements such as in-line and stand-alone testers had to be implemented. In addition, the quality standards for the production of high-quality electronic printed boards must be maintained at all times.

Our Solution

Through the use of the MTS test systems today the process engineering requirements can be easily implemented. Thanks to the user-friendly programming interfaces of the associated software, Melecs is able to quickly and efficiently upgrade its in-circuit test programs create. With our MTS test series, they will continue to be competitive in the future.

The system supervisors Michael Paller (left) and Josef Kancz from Melecs are convinced: „The MTS 300 Lambda edition has made our production lines more efficient.“

Melecs® in figures

Company	MELECS EWS GmbH & Co KG, GZO
Industry	Electronic Industry
Locations	Austria, Czech Republic, Hungary, Romania
Employees	about 1.000
Annual turnover	€ 120 million
Manufacturing	€ 13 million / year
Production lines	9 SMD lines
Customer since	2002
Test methods	In-Circuit test, functional test, parallel test (Lambda edition)
Our products	30 test systems (Sparrow, Sigma Lambda edition und Sprint)

We chose Digitaltest, because...

... after a detailed market analysis price-performance ratio and the technical know-how of Digitaltest convinced us.

We made the right decision, because...

... Digitaltest offers an excellent service, which responds quickly and and also the telephone support is very competent. In addition, the maintenance and user-friendliness of the systems influence our production very positively - even program changes are carried out easily.
