

For our team in Cairo, Egypt we are looking for an Software Engineer (f/m/*)

Since 1980 Digitaltest is a strong partner of the electronics industry and has years of experience in development, implementation and support of automated test equipment (ATE) for electronic printed circuit boards.

Digitaltest is a family with creative, strategically thinking, goal-oriented, quiet, loud, experienced and fresh heads. With us you can grow old and stay young – because the best ideas come from a true community.

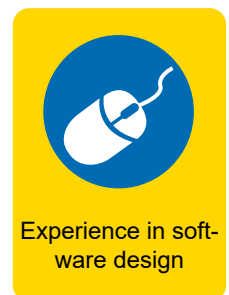

Your tasks

- Software development activities using C++, C#, and VB.NET including: designing, coding and debugging software modules, also software review and testing
- S/he will undergo an intensive training on the employed software paradigms and used tools
- S/he will be required to interact with software department members, product customer support, and hardware engineers
- S/he should also work closely with the supervisor to meet the required standards, to apply customer requirements on new products and to update the existing ones

Your profile

- Very good programming skills in C++, C#, and VB. NET
- General knowledge in software design methods required
- Good problem solving, interpersonal and communication skills required
- Open to new technologies and ability to learn
- Good time management and organizational skills are desirable
- Excellent command of English (reading, writing and speaking)
- Exempted/completed military service (for male candidates)

Have we aroused your interest? Then apply now - we look forward to getting to know you!
We will be happy to answer any open questions you may have at 002 02 2720 761.
